Resp. Ed.: Bykov, V.T., Professor; Ed. of Publishing House: Bankvitser, A.L.; Tech. Ed.: Prusakova, T.A.

PURPOSE: The present collection of articles is addressed to engineering and technical personnel of industrial, planning and managing bodies in Soviet industries, and members of scientific and educational institutions dealing with the problems of bleaching processes.

COVERAGE: The rapidly expanding industries of the Soviet Far East are continuously increasing their demands for various types of sorbents for processing and refining mineral and vegetable oils, animal fats, etc. The present collection of 13 articles describes the various types of natural sorbents extracted in the Soviet Far East, their

Card 1/4

Natural Sorbents of the Far East 1021

physical-chemical and adsorptive properties, the history of their industrial exploitation, the geological formations in which they are found, the theory of their bleaching and refining action, the effect of weathering on their structure, and their uses in industry. The studies conducted by the authors indicate the presence of large quantities of high-quality natural sorbents in the Soviet Far East sufficient to satisfy local demands, thus eliminating the necessity of their import from other parts of the USSR.

Title : On the Interpretation of Slater's Approximation of Atomic Orbitals

Orig Pub : Acta phys. polon., 1958, 17, No 2-3, 199-200

Abstract : An opinion is expressed, that the interpretation of the single-electron approximation of Slater, given in the well-known monographs by Gombas (Referat Zhur Fizika, No 7, 1954, 6903), Airing, Walter, and Kimball (Quantum Chemistry, Foreign Literature Publishing House, 1948) is in error and contradicts the ideas of Slater. In the author's opinion, the use of the single-electron Slater functions as trial functions is based on the assumption that the dependence of the radial portion of the wave function on the orbital quantum number is of

Title : I. Anemia and Degenerative Changes in the Organism of Chicks under Conditions of Disturbed Relationship Between Folic Acid and Other Water-Soluble Vitamins (Interdependence Between Folic Acid and Ascorbic Acids). II. Paresis and Paralysis of Peripheral Nerves in Chicks under Conditions of Disturbed Relationship Between Riboflavin and Other Vitamins of the B Group in the Diet.

Orig Pub : Acta physiol., polon., 1957, 8, No 1, 139-152

Abstract : A spontaneous disease of chicks, which was not caused by a viral infection and which was manifested by a disturbance of hemopoiesis and fatty degeneration of the liver, or by paresis and paralysis of feet, was observed. The pathological course of the disease was experimentally reproduced, and the role of vitamins added as a supplement to the basic ration.

Card : 1/3

POLAND/Diseases of Farm Animals. Noninfectious Diseases

Abs Jour : Ref Zhur - Biol., No 7, 1958, No 31116

composed of natural feeds was explained. The disturbance of hemopoiesis and the process of fatty degeneration of the liver were more marked in the absence of both folic and ascorbic acids from the vitamin complex than when only one of them was wanting. The disturbance of the process of the production of blood was characterized by the appearance in the liver of cellular infiltrates consisting of hemocytoblasts in different stages of development. Such infiltrates were also discovered in other organs (kidneys, heart). Paralysis and paresis of the feet developed in cases where riboflavin was lacking from the vitamins supplied. Among chickens which were receiving basic rations without their supplementation by some water-soluble vitamins, only sporadic cases of disease with no marked symptoms, were observed. From the data obtained, it may be concluded that the addition of an incomplete complex of biologically active substances to the basic diet leads to the disturbance of the chemical equilibrium of the metabolic processes. The results of the experiments indicate

98a. F. Zaleski and W. Pogony. "Rubble as building material (Zalysie gruzu jako materialu budowlanego)," *Instytut Techniczny*, Jan 1917, vol 4, pp 34-50.

Cement-bonded rubble (cemento-gruz) is used for brick production in Poland. Tests are given of (1) its compression and bending strength; (2) the dependence of the bending strength on firing and defreezing; and (3) its hygroscopic, drying, and thermal properties. A conclusion is reached that the quality of cement rubble equals that of ordinary bricks.

14066. The methods of testing measurement trans-  
formers in industrial practice. K. AULEYTNER,  
Z. MAKOWSKI AND J. ZALEWSKI. *Przegląd elektrotech.*,  
31, Nr. 2-3, 254-8 (1955) in Polish.

The practice shows the ineffectiveness of methods  
of test used during manufacture. The need arises for  
detailed tests on each of the components such as wire,  
insulating materials, lacquers, laminations, etc. The  
laminations must be magnetically homogeneous;  
classification according to their magnetic quality must  
be done by their producer. Transformers in produc-  
tion must be checked for defects of insulation between  
turns, for moisture, de-aeration, etc. Finished trans-  
formers must be tested with a.c. and pulses. The  
test voltage of the prototype transformer must be at  
least 5% higher than for transformers produced after.

ACCESSION NR: APL011796

P/0045/63/024/006/0823/0825

AUTHOR: Zalewski, Kacper

TITLE: Remark on the angular distribution of particles in high energy jets

SOURCE: Acta physica polonica, v. 24, no. 6, 1963, 823-825

TOPIC TACS: angular particle distribution, high energy jet, theoretical versus experimental data, 2 sigma criterion

ABSTRACT: The experimental data are as yet too scanty to determine unambiguously the probability angular distribution  $P(x)$  of particles in a jet. The author concentrates on one among several competing theoretical distributions:

$$P(x) = \begin{cases} \text{const} \neq 0 & \text{for } a' \leq a \leq x \leq b \leq b' \\ 0 & \text{for } x < a' \text{ and for } x > b' \end{cases} \quad (2)$$

where  $a$ ,  $a'$ ,  $b$  and  $b'$  may depend on energy and perhaps some other parameters.

Card 1/2

ACCESSION NR: AP4011796

For  $x$  changing from  $a$  to  $a'$  and  $b$  to  $b'$ ,  $P(x)$  is assumed to decrease monotonically. The standard method of comparing this distribution with experiments is inconclusive, according to Professor Gierula. The author applies another test indicating that according to the 2sigma criterion distribution (2) is incompatible with experiments, however  $a$ ,  $b$ ,  $a'$  and  $b'$  are chosen.

Original has 11 numbered equations and 1 table which compares the theoretical and experimental results for all intervals,  $N = 855$ ; first and last intervals for all jets,  $N = 144$ ; and the first three and last three intervals excluded from each jet,  $N = 372$ .
